Professional Summary

Generative AI and Full-Stack Developer with hands-on experience building LLM-powered applications, multi-agent systems, Retrieval-Augmented Generation (RAG) pipelines, and MCP-based tool-calling agents that integrate with real-world APIs (Google, Notion). Skilled in designing AI chatbots, automation pipelines, and data-driven models with a strong focus on usability, performance, and clean system architecture.

Technical Skills

Languages: Python, PHP, JavaScript, Java, C#

AI / LLM Stack: LangChain, LangGraph, MCP (Model Context Protocol), RAG, LLM Agents, Tool-Calling, Embeddings, Vector Databases, Whisper, OCR

Frameworks: FastAPI, Flask, Django, CodeIgniter, Laravel, Spring Boot, ReactJS

APIs & Integrations: Google OAuth 2.0, Google Calendar API, Gmail API, Notion API

Databases: MySQL, MongoDB

ML / Data: NumPy, Pandas, Scikit-learn, PyTorch, TensorFlow, Matplotlib, Seaborn

Tools: Git, REST APIs, XAMPP

Education

MCA – Generative AI, Alliance University 2025 – 2027

B.Sc. IT (Software Development), Gujarat University 2022 – 2025

Experience

Generative AI Developer Intern – Let's Enkindle 2025

- Built and tested LLM-based backend services using FastAPI and Flask for production-style AI workflows.
- Designed RAG pipelines with vector embeddings for accurate document-based question answering.
- Applied prompt engineering techniques to improve LLM response accuracy and output quality.

Freelance Web Developer

- Designed and developed a responsive real estate website with clean UI and cross-device compatibility.
- Collaborated directly with the client to refine content presentation and improve user experience.

Projects

AI Workspace Assistant – MCP-Based Chat, Calendar & Notion Automation Agent *Private Repository*

- Built an MCP (Model Context Protocol) chatbot that lets users manage work entirely through natural conversation.
- Integrated Google OAuth 2.0 so the agent securely authenticates and acts on the user's behalf across Google services.
- Enabled the bot to save chat-derived content directly to Notion and auto-create corresponding Google Calendar events.
- Automated sharing by sending the generated Notion page link to teammates via the Gmail API, removing manual hand-off.

TrueWrite AI – Content Detection & Humanization Platform GitHub

- Built an AI system to estimate the AI-generated vs. human-written likelihood of a given text.
- Implemented LLM-agent-based content humanization using advanced prompt engineering techniques.

CVForge AI – Multi-Agent Resume Optimization System GitHub

- Developed a full-stack ATS-friendly resume builder (ReactJS + Flask) with a LangChain multi-agent pipeline via OpenRouter for resume analysis and suggestions.
- Added OCR-based resume parsing, Whisper voice-to-text input, and an ATS scoring engine with actionable feedback.

E-Waiter 2.0 – Restaurant Order & Staff Management System GitHub

- Built a full-stack restaurant management platform (PHP, MySQL) with role-based dashboards for Admin, Waiter, Chef, and Customer.
- Implemented end-to-end order flow and table management to streamline restaurant operations across roles.

RAG Console Q&A Bot – Retrieval-Augmented Question Answering Engine GitHub

- Developed a Flask-based RAG application that retrieves context and generates accurate console-based answers to user queries.

Additional Information

Actively seeking opportunities in Generative AI, Machine Learning, Backend Engineering, and Full-Stack AI Development roles.
